We make it visible.

Dear colleagues and friends

It is a great honor to cordially invite you to the "2nd **Istanbul Microneurosurgery Course**". As we are building the course traditions to cover the main components of microneurosurgery we combined hands-on cadaver dissection and live surgery.

First two days, through white matter dissection workshop all participants will learn the three dimensional anatomy of the human brain. In the following days, by observing live surgery, lectures and discussions, the significance of mastering the brain anatomy will be experienced directly by the participants. The combination of a hands-on cadaver dissection with live surgery makes this course special.

Professor M. Gazi Yaşargil, who originated the of such courses, will be among us. This is a once in a lifetime opportunity for all participants to learn the principles of microneurosurgery from the founder himself. We are pleased to announce this year's "Special Guest," Professor Anton Valavanis, student and later associate of Professor Yaşargil, is recognized as one of the leading interventional neuroradiologists worldwide. Contributions from international experts will heighten your course experience.

We are looking forward to welcoming you from all over the world for our course.

Sincerely

Uğur Türe
